**Reduce Waste | Save Time | Record Area**

**Simple-to-use GPS guidance  
and proof of placement for  
grass-based farming**

Farmers face constant pressure to complete weather-dependent jobs in good time, save on inputs such as fertiliser, and record what's been done for legislative and consumer-driven traceability.

*Grass-Guide* is a simple-to-use solution for grassland farmers which will help increase your efficiency and avoid over-application while making your record-keeping seamless.

Driving the field any way that suits you, the coverage map on the 7" tablet shows where you've been, and virtual field markers show where you need to go.

*Grass-Guide* has the added feature of measuring the field on your headland pass. Finish a field and start a new one with our single button control panel. Once complete, view the job details overlaid on a satellite map on the free-to-view *Grass Guide Online* website.

Your investment in *Grass-Guide* does not go out of date - because we use an app supported by an in-house development team, you benefit from routine upgrades and product enhancements ongoing. Supplied with quality, market-leading hardware produced by NovAtel and Samsung, *Grass-Guide* components are covered by a one-year manufacturer's warranty.

## Grass-Guide Online

- *Grass-Guide* automatically records all jobs and stores these for traceability.
- Connect your *Grass-Guide* tablet to any Wifi connection to upload data into the cloud.
- Using a secure individual login provided by Sixty-5, view all completed jobs, the areas covered and time taken to complete the job, at no cost.
- Label your activity and add custom notes.

### GPS/Glonass Satellite Receiver

- 30cm (12 inch) pass-to-pass accuracy enhanced by GL1DE™ technology
- Bluetooth connectivity

### Samsung Tablet with 7" Screen

- Android operating system with 8GB storage
- Rugged Bobgear protection case
- Mounting system
- Wifi and Bluetooth connectivity

### App-Base Guidance

- Free updates and enhancements
- In-house software development

*"Grass-Guide is a great job for fertiliser and spraying. It's really easy to use, it lets me get fertiliser onto the silage ground when it's bare and I can see clearly what I've done. Unlike other systems I have seen, there's no set up at the headland needed, once I'm in the field I just push one button to get started."*

*The automatic boundary mapping feature is really useful because it shows me the total area of the field and the area covered on the first run round, this gives me the confidence to know I have set the spreader right for the correct amount of fertiliser. I would now not work without it!"*

- S. McManus, Farmer, Northern Ireland
